BRIGHT COFFEE SHOP

Project Description

Presented by: Musiiwa Thandabantu

CONTENT

PROJECT OVERVIEW

This project analyzes the Bright Coffee Shop Sales dataset, which contains daily transactional data from a coffee shop. The analysis is conducted in response to a new CEO's strategic goal to:

- Increase overall revenue
- Improve product performance
- Enhance data-driven decision-making

OBJECTIVES

The key goals of this analysis include:

- Identify sales trends over time (daily, weekly, monthly)
- Determine peak sales hours and high-performing days
- Analyze product performance across categories
- Evaluate store level performance
- Generate insights to support strategic business decisions

DATASET DESCRIPTION

The dataset contains transactional level data, including:

- Transaction ID
- Date and Time of Sale
- Store ID
- Product ID / Product Category
- Quantity Sold
- Sales Amount / Revenue

TOOLS AND TECHNOLOGIES

- Databricks (SQL) (Data querying and aggregation)
- Excel / Google Sheets (Initial exploration & pivot tables)
- Microsoft Excel (Data visualization)

KEY INSIGHT PERFORMED

1. **Sales Performance Analysis**
    - Total revenue over time
    - Revenue trends by day and month

2. **Product Analysis**
    - Best-selling products
    - Product category performance
    - Number of products sold per store

KEY INSIGHT PERFORMED CONT..

3. **Transaction Analysis**
   - Average time to complete a transaction
   - Number of transactions per day

4. **Time-Based Insights**
   - Peak sales hours
   - Highest revenue days of the month

KEY INSIGHTS

- Peak sales occur during morning hours (commuter rush)
- Certain product categories consistently outperform others
- Specific days of the month generate higher revenue
- Some stores outperform others in both volume and revenue

KEY INSIGHTS

- Data cleaning and transformation scripts
- Databricks(SQL) queries used for analysis
- Dashboard / visualizations (if applicable)
- Business insights presentation for stakeholders

DELIVERABLES

This project demonstrates how data analytics can:

- Support executive decision-making
- Identify revenue growth opportunities
- Optimize product offerings
- Improve operational efficiency

FUTURE IMPROVEMENTS

- Predictive analysis (forecasting sales trends)
- Customer segmentation
- Inventory optimization
- Integration with real-time data dashboards
